Harris Stratex Networks Opens Sydney Office

RESEARCH TRIANGLE PARK, NC, July 29, 2008 – Harris Stratex Networks, Inc. (NASDAQ: HSTX), the leading independent supplier of turnkey wireless transmission solutions, today announced the opening of the company's newest office in Sydney, Australia. The company will supply operators with cost-effective wireless transport solutions to enable customers to transport high-speed, carrier-class Ethernet data, alongside traditional TDM traffic, to support network migration to next-generation IP services.

Harris Stratex will also be able to provide enhanced turnkey services, including radio and IP network planning, engineering and deployment services, and technical service and support for customers in the region. With major Australian operators expanding and rolling out 3G networks and the government planning a $4.7 billion initiative to connect 98% of the population to high-speed data services though the National Broadband Network initiative, Sydney is a key location for business presence in the Pacific telecommunications arena.

Harris Stratex Networks has been providing wireless backhaul solutions in the Australian market for more than 20 years. The new location will support the company's extensive customer base, including a number of major contracts with fixed, mobile, broadcast media and WiMax operators in the region.

"The opening of the new Sydney office underscores our commitment to our local and global customers in this rapidly growing market," said Harald Braun, president and CEO, Harris Stratex Networks. "We are delighted to continue strenthening solid relationships and creating additional localized support for all our customers in the region."

"The presence of this new facility marks our commitment to customers in the region to supply fast, reliable services," said Brendan Cochrane, Harris Stratex Country Manager for Australia. "The remote geographic location of Australia can isolate the country from the rest of the world at times. To be successful here, we are following through on our commitment to the market and the Australian people by having a significant local presence."

Harris Stratex Networks recently introduced the Eclipse™ Edge, the most cost-effective and environmentally friendly wireless transport product in its class. The new ultra-lightweight and compact solution will provide high-speed wireless connectivity for both native NxE1 TDM and Carrier Ethernet data. This capability enables mobile operators to deploy cost-effective, next-generation IP services right to the network edge.

Details of the new office are as follows:

Name: Harris Stratex Networks Australia
Established: June 23, 2008
Director: Brendan Cochrane
Location/Address:
2- 12 Chaplin Drive
Lane Cove West
Sydney, Australia, 2066
