

MagtiCom Selects Harris Stratex Networks for Wireless Infrastructure Expansion

Leading mobile operator in Georgia to expand network infrastructure and provide advanced services to rural regions

RESEARCH TRIANGLE PARK, N.C. – May 19, 2009 – Harris Stratex Networks, Inc. (NASDAQ: HSTX), a leading specialist in backhaul solutions for mobility and broadband networks, has secured a contract with MagtiCom, the leading mobile operator in Georgia. Harris Stratex' Eclipse™ advanced nodal wireless networking platform will be deployed to provide end-to-end backhaul of both TDM and native Ethernet traffic, extending MagtiCom's wireless infrastructure.

The Eclipse platform seamlessly supports TDM, as well as carrier-grade Ethernet data traffic, using the platform's Liquid Bandwidth™ software-scalable capacity migration capability. The extensive use of the nodal architecture gives MagtiCom the ability to configure TDM or Ethernet services as and where needed, under software control. The unique feature set offered by the Eclipse platform allows flexible network expansion that is adaptable to the changing needs of MagtiCom to accommodate next-generation IP-based services. The network is controlled and monitored by Harris Stratex' ProVision® Element Management System (EMS), which provides advanced features such as circuit provisioning and network health reporting.

“Choosing the Eclipse platform was a logical process for us, considering our long-term relationship with Harris Stratex Networks,” said David L. Lee, chief executive officer, MagtiCom. “The company continues to deliver the most advanced point-to-point microwave radio technology available. While we restructure our growing network to roll out 2G, 3G, CDMA and WiMAX services for our 1.8 million subscribers, the high product flexibility and quality, and the excellent support that Harris Stratex provides, will be key. This is not just a supplier, this is a partner that is helping us optimize our transmission network to remain competitive for the future.”

“We are very pleased to continue our long-term relationship with MagtiCom,” said Harald Braun, chief executive officer, Harris Stratex. “The MagtiCom transmission network needs are very diverse, and Eclipse is the ideal platform to support the mixture of TDM and native-Ethernet traffic backhaul. The selection by MagtiCom is a great testament to the flexibility the Eclipse solution provides for legacy 2G applications, current 3G rollouts and future 4G networks, such as WiMAX.”

###

About Harris Stratex Networks, Inc.

Harris Stratex Networks, Inc. is a leading specialist in backhaul solutions for mobility and broadband networks. The company offers reliable, flexible and scalable wireless network solutions, backed by comprehensive professional services and support. Harris Stratex Networks serves all global markets, including mobile network operators, public safety agencies, private network operators, utility and transportation companies, government agencies and broadcasters. Customers in more than 135 countries depend on Harris Stratex Networks to build, expand and upgrade their voice, data and video solutions. Harris Stratex Networks is recognized around the world for innovative, best-in-class wireless networking solutions and services. For more information, visit www.HarrisStratex.com.

About MagtiCom Ltd.

MagtiCom mobile service was launched in September 1997. Today the company has over 1.8 million subscribers and covers 97% of the Georgian population. In summer 2006 MagtiCom was the first Georgian mobile operator to provide 3G services. Today the company has added CDMA and WiMAX to its portfolio, and remains the leading provider of innovative voice and data services in Georgia. The company is owned by the Telcell Wireless LLC and ITC LLC. For more information, visit www.magticom.ge.
